

In partnership with the Children's Center and Clackamas County Educational Service District we invite you to a **FREE** training on the latest in volunteer screening best practices and identifying potential child sexual predators

Is your non-profit following volunteer screening best practices?

- ⇒ Experts estimate that 94-98 % of child sexual predators have clean background checks.
- ⇒ Peak vulnerability for boys and girls are ages 7 to 13.
- ⇒ One study of 4,000 abusers found 20% reported they had their first victim before they were 10, another 43% began to molest between the ages of 10 to 15, and 76% said they began to molest before age 20.

IYS has found that less than 11% of youth programs use best practices to protect youth. *Improve the statistics – join us!*

Keep Kids SAFE: Prioritizing Youth Safety with Research Based Volunteer Screening Practices is a free, full-day training on preventing child sexual abuse in youth-serving programs. The training will explore tools to help decide if a volunteer is a good fit for your program. Please use the registration link below to register online.
